ENERGETICS' PR 4900p E-Z is perfect for occasional cardio-vascular workouts at home. Thanks to its easy manual fold-up and a mere 45kg of weight, this treadmill offers easy handling, space-saving storage, and plug-and-play usage. It's equipped with a reliable 1.5-hp motor that is capable of speeds up to 12km/h. While offering only one single quick-start program, workout variability is provided by the manually adjustable, three-level incline. The handlebar features pulse sensors and a computer console tracking calories, pulse, time, speed, and distance. The running belt measures 40x120cm, moving over a sturdy, medium-density fiberwood deck offering great stability and shock absorption. The PR 4900p E-Z is designed to accommodate runners up to 120kg.
