Nivel System DL60, DL60L. Electronic level.

MORE THAN PRECISION SPIRIT LEVEL

Precise, fast in use electronic level with digital readout of position via the LCD display. Ability to work in the inverted position (180 degrees "upside down"). If the reading from the LCD is difficult, it is possible to "freeze" the value on the display (gaining level is indicated by a beep). The equipment impresses with simplicity of operation and reliability. It is an ideal choice for any general construction, for all those who spend greater part of their time spending on leveling, assembling of elements horizontally, vertically or at a given angle. With **DL60** you can do it faster, more accurately and without errors.

Nivel System is a brand of measuring instruments for the construction and surveying introduced to the Polish market by TPI in 2003, **Nivel System** Products are addressed to a wide audience, for whom one of the basic criteria for selection is a reasonable price with a simultaneous guarantee of adequate quality, which provides the ability to use the professional measuring set in multiple applications with lower costs than before.

Instruments **Nivel System**, characterized by its own original designs and colors make the recognition of the brand simple and straightforward. Nivel System is an assurance of safe and comfortable working in many common applications. With a network of service centers spread across the country, each user has an easy access to professional services.
